Hands-free breast pump line

The Freedom Series breast pumps are an innovative solution designed for modern women. Lightweight, compact and fully wireless, they provide complete freedom while expressing milk – entirely hands-free. This is a breast pump that adapts to you – not the other way around. The hands-free design frees not only your hands, but also your mind, giving you space for a moment to yourself or your daily tasks. Because breastfeeding is not just about milk – it's about comfort, peace of mind and the confidence that you are doing it right.

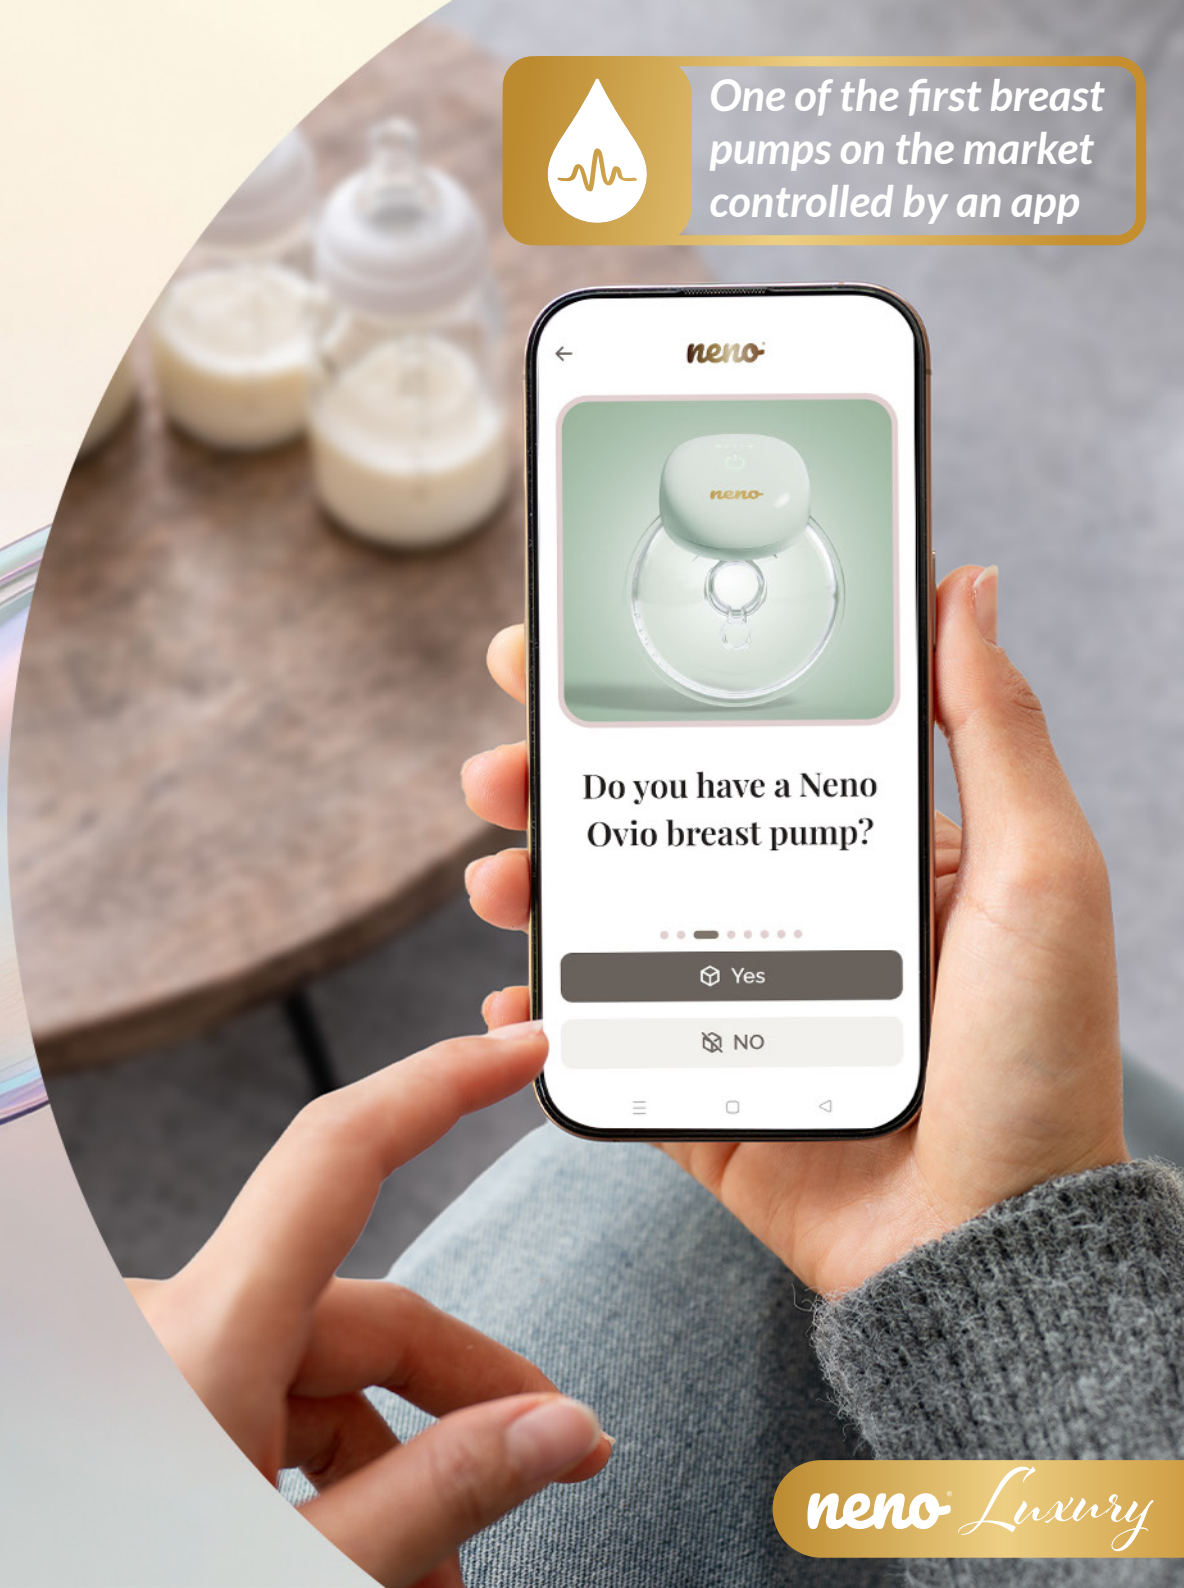
neno® Luxury

1'st breast pump neno® with the app

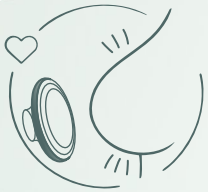
The first Neno breast pump controlled via an app

Neno Ovio is the first breast pump by Neno that you can conveniently control using a dedicated mobile app. This innovative solution allows you to adjust device settings, monitor each session, and save data directly on your phone without touching the pump's control panel. Discover a new level of comfort with the Neno app – greater freedom, precise control and full oversight of your pumping process.

One of the first breast pumps on the market controlled by an app



neno® Luxury



Comfort and pain relief

The soft, flexible breast shield adapts to the breast – without pressure or pain.

Quiet as a whisper

Motor with a noise level of 32 dB.

Mobility and hands-free

The breast pump works, you stay free

Three modes

A suction system that mimics the natural rhythm of a baby.

Easy cleaning

Designed with hygiene in mind. Simple construction, complete cleanliness.

Application

Monitor milk expression and control the breast pump in the app.

Ultra-slim

Lightweight, discreet, and comfortable to wear.

Trust and security

Safe food-grade silicone, BPA free, REACH compliant.

neno Luxury

App – control and session tracking

Neno Ovio connects to the dedicated Neno app, offering convenient and intuitive control of your lactation routine. From your smartphone, you can operate the device without reaching for the pump panel, which increases comfort and discretion. The app allows you to measure and record the duration of every pumping session, analyze pumping data on clear charts, track progress and adjust settings to your individual needs. It also stores a complete history of all sessions, helping you organize your feeding routine and better plan your day. Additionally, the built-in knowledge base provides helpful guidance whenever you need it.

Imitates the natural sucking reflex

The three-phase operating system of the breast pump mimics a baby's natural sucking reflex. The initial fast pumping stimulates milk flow, making it easier to achieve deeper and more thorough milk expression in the next phase. The device then adjusts its rhythm to match the baby's natural sucking pace, supporting efficient and comfortable emptying of the breast. As a result, milk expression becomes more intuitive, gentle, and closer to natural breastfeeding.

Phase I — Stimulation Mode

Intense, rapid pulsations that stimulate milk flow.

Phase II — Deep Expression Mode

Slower, deeper movements that allow effective milk expression.

Phase III — Mixed Mode

Especially helpful in cases of low milk supply. The third phase stimulates lactation by mimicking the way an infant sucks — the breast is thoroughly emptied and the milk ducts are stimulated to work.

Lactation monitoring and notes

Would you like to better understand your lactation and establish your own pumping schedule? With Neno Ovio you can do it your way. The dedicated Neno app helps you track the amount of milk expressed from each breast, the duration of pumping sessions and add your own notes to observe lactation patterns. All important information is always at hand, and any changes can be easily reviewed thanks to clear charts. It is a unique solution that helps you better understand your lactation process.

neno Luxury

Lightweight and portable

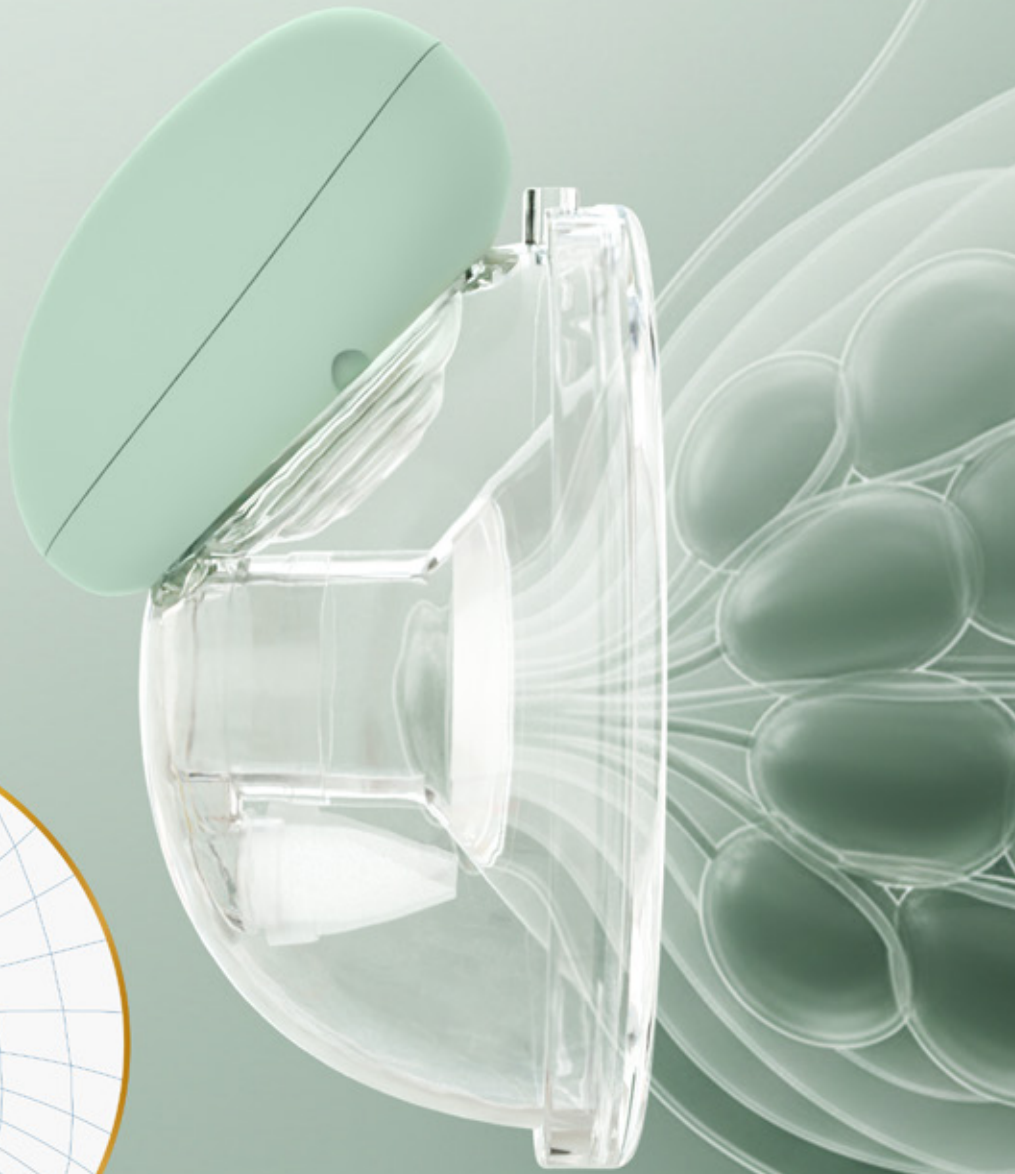
The compact design of Neno Ovio allows you to take it with you wherever you go. Its small size and lightweight construction mean it easily fits into a stroller bag, backpack or even a handbag. The ergonomic shape fits comfortably in the hand, while intuitive operation enables quick and convenient pumping in any situation. It is an ideal solution for active mothers who value mobility, discretion and comfort both at home and on the go.

Closed system

Neno Ovio features a closed system that prevents expressed milk from flowing back. A special valve effectively blocks reverse flow, while an additional membrane protects the motor from moisture. This solution increases safety, improves hygiene and ensures reliable operation of the breast pump. As a result, every component works in controlled and properly protected conditions.

Anatomical breast shield

The anatomically shaped breast shield was designed for comfort and a natural fit to the breast. Its carefully contoured design ensures proper adherence to the body, supporting effective and comfortable milk expression. This structure helps maintain a stable position of the shield, allowing you to pump without constantly adjusting its placement.



neno Luxury

Soft breast shield material

The breast shield of the Neno Ovio pump is made of high-quality soft silicone, which is gentle on the skin and provides high comfort during pumping. The silicone surface is easy to clean and safe for contact with food, ensuring hygiene and peace of mind with every use.

Adjustable fit

Neno Ovio can be tailored to the individual needs of every mother. The set includes breast shield reducers in sizes 21 mm, 19 mm and 17 mm, allowing precise adjustment to the shape and size of the nipple. A properly selected size increases pumping comfort, improves efficiency and ensures convenience even during frequent use.

Small and discreet

Neno Ovio stands out with its compact size and exceptionally discreet design. Thanks to its thoughtfully engineered construction, the pump remains almost invisible under clothing while remaining very comfortable to wear. Despite its compact form, the milk collection cups are surprisingly spacious, allowing you to pump milk without frequent emptying – whether at home, at work or while traveling.

Quiet operation

Neno Ovio operates extremely quietly – the noise level is only 32 dB, making the device nearly silent during use. This allows you to pump comfortably at any time of day or night without worrying about waking your baby or drawing attention in public places. Quiet operation increases your sense of freedom and ensures complete discretion in every situation

Easy milk pouring

The opening in the pump cup has been designed to allow quick and precise pouring of expressed milk directly into a bottle or storage bag. The specially shaped structure enables controlled liquid flow, minimizing the risk of spills and preventing the loss of precious milk. This makes the process more hygienic and convenient, allowing you to quickly prepare milk for feeding or storage. It is a practical solution that saves time and enhances everyday convenience.

Comfort of use

The Neno Ovio is a device designed to provide maximum comfort and hygiene for everyday use. The set includes a practical lid that effectively protects the interior of the shell from dust and dirt, ensuring safe storage and transport. The included stable stand allows the device to be placed on a flat surface, minimising the risk of it tipping over and spilling milk. An additional convenience is the bra extension strap, which increases comfort when wearing and using the breast pump. It allows you to better adjust your underwear to your changing body and reduces pressure, which is particularly important during prolonged use. These are well-thought-out solutions that genuinely enhance the comfort and functionality of the device every day.

Set contents

With the Neno Ovio electric breast pump, you receive everything you need for convenient milk expression wherever you are. The set includes the pumping device, a 24 mm silicone breast shield and breast shield reducers in sizes 17 mm, 19 mm and 21 mm, allowing for proper adjustment to the nipple. The package also contains a breast shield cover, two membranes, two valves, and a 180 ml milk container with a stand. In addition, the set includes a USB-C charging cable and a user manual. The box also comes with an elegant velvet storage pouch and two breast pads and bra extension strap. Thanks to this complete set, you can start using the pump immediately after unpacking, enjoying comfort, hygiene and full readiness in every situation.

Large capacity

The Neno Ovio milk collection cup has a capacity of 180 ml, allowing you to express a larger amount of milk during a single session without the need to empty the container. This improves efficiency and streamlines the entire process, especially when time matters. The device is practical and effective for everyday use – both at home and during short breaks at work.

Easy cleaning

The pump components have been designed for quick and hassle-free cleaning. The smooth surfaces and simple construction allow thorough washing of the cup under running water with a mild detergent. The parts can also be safely sterilized in devices designed for disinfecting baby accessories, maintaining high hygiene with minimal effort.

Sterilization

The components of the Neno Ovio breast pump can be easily sterilized to maintain the highest level of hygiene with every use. Parts that come into contact with milk are made of materials resistant to high temperatures, making them suitable for boiling or sterilization in dedicated devices. Regular sterilization ensures safe use and guarantees that expressed milk is properly protected and ready to feed your baby.

Easy storage

The set includes a soft velvet pouch that allows safe and hygienic storage of the pump in a backpack, handbag or suitcase. Thanks to it, the pump is always ready to use, whether at home or on the go. The pouch protects components from dirt and damage while helping keep everything organized and easy to pack.

Perfect gift

Looking for a gift for an expecting mother? Choose a device that truly supports her at the beginning of her breastfeeding journey. The Neno Ovio 3-phase electric breast pump with an app is a practical and thoughtful gift that combines modern technology with everyday comfort. With functional accessories, intuitive operation and the ability to control the device via a mobile app, the pump helps organize feeding routines and provides greater freedom during the first weeks after birth. It is a gift that shows care and gives a new mother comfort and support in her new role.
