Safe heating of milk

Not sure how to prepare natural breastmilk safely? Considering the richness of the ingredients found in breast milk, we've equipped Lindo with a special MILK function which heats up to 40°C. This way, you can provide your little one with a valuable meal every day without unnecessary worry or effort.

Effective sterilization

Harmful microorganisms are a major threat to developing baby's health. We are aware of this, which is why we designed the Neno Lindo to provide effective sterilization in three modes: for plastic, silicone and glass products. The sterilization time, matched to the item, allows you to maintain cleanliness, safety and hygiene at the highest level.

Temperature support

Sometimes reheating can be endless. All it takes is a moment's distraction and your reheated food is cold and tasteless. The solution to this inconvenience is the FORMULA function, with which the Neno Lindo can maintain the temperature between 40 °C and 65 °C. This ensures that warm meals are always at hand.

Safe defrosting

Many hours of waiting, a water bath... How do you defrost natural milk to make it fit for consumption? You can do it quickly and safely with the Neno Lindo. The device not only ensures the right temperature and time, but also guarantees that the food doesn't lose its valuable properties. In addition, after 30 minutes, it activates the constant temperature maintenance function (40°C).

Rapid heating

We knew that one of the biggest problems for busy parents is a day that is too short when we designed the Neno Lindo. That is why we have designed the product to heat up jars of food and water for modified milk much faster than the standard mode. This not only makes working easier, but also saves time.

Heating food

Preparing hot meals in the traditional way involves stubbornly standing at the cooker and washing up. With Lindo, you can discover the practical side of life, heating jars or breast milk storage bags without worrying about burning or dirtying lots of dishes.

Touchscreen display

Are you in a hurry because of a heavy workload? The large touchscreen display comes to the rescue with full access. The illuminated menu allows you to select options and perform actions instantly.

Built-in LED light

Heating food in the evening or at night can sometimes be problematic, which is why the Neno Lindo has a built-in LED light. The subtle spotlight is not glaring and makes it easy to use in the dark. The light remains active for up to 30 seconds after switching off, giving you the opportunity to safely leave the room or put away the accessories you have previously used.

Modern design

If you like products that are refined in every way, you will appreciate Neno Lindo's versatility and elegant design. With its smooth casing in a universal white colour, the device complements the modern and minimalist design of kitchens or other rooms.

Comfort of use

Defrosting, heating, sterilizing, supporting...that, in a nutshell, is all you can use the Neno Lindo for. Its functionality will make your life significantly easier. By using a fast and reliable device, you will find more time for yourself and your family or simply not be late for work.

Stylish kitchen gadget

If you look at the sterilizer from the right angle, it looks like a... modern decorative element. The unusual oval body and the silver-finished main panel definitely set Neno Lindo apart from traditional products in the home appliances category.

Space-saving

Forget about large and heavy household appliances. Neno Lindo doesn't take up a lot of space on your kitchen counter and easily fits at the bottom of a deep drawer. All thanks to its slimness, compact dimensions and easy to unfold components.

6in1

Multifunctionality is the word that best defines the scope of the Neno Lindo. The various options for heating, defrosting and maintaining the temperature are helpful at different times of the day and at many stages of a child's development. The product's versatility fits perfectly with every family's dynamic lifestyle full of surprises.
