# *The milk prep machine that changes everything*

You know what's really valuable for any parent? Time and comfort. The Neno Primavera is a device that will save you both by changing the way you approach feeding. The milk prep machine is compatible with different types of bottle and most modified milks. It prepares the perfect bottle in seconds, precisely dispenses the right amount of formula milk and heats the water to the perfect temperature – without the risk of mistakes, mess or stress.

**нено** PREMIUM

# Milk ready in seconds

## Preparing the machine for operation - only once a day:

Pour in modified milk - no confusion or mess

Pour in cold, boiled water - the machine will ensure the right temperature

## Preparing milk in seconds every time:

Place the bottle - choose your preferred height on the tray

Select a programme - the machine will do the rest

# Automatic Mixing Technology

By following the instructions, you can select the appropriate mix concentration programme. This will ensure that the machine automatically selects and mixes the correct amount of water and modified milk. The result? A perfect, uniform consistency without air bubbles.

Remember! Use the formula: **capacity of the measuring cup in grams x 3.33 = programme to be selected** (round up the result).

*examples:*

Your programme

 5g x 3,33 = 16,65 → **17**

Your programme

 4g x 3,33 = 13,32 → **13**

Your programme

 4,3g x 3,33 = 14,32 → **14**

# Intelligent sensor system

An advanced sensor system ensures complete safety. If you forget to put the bottle down, the machine will inform you immediately. No milk, no water or an incorrectly fitted funnel? The machine will immediately display a message, giving you full control.

# *Milk without lumps and bubbles*

Thanks to the 3-stage height adjustment of the bottle, you can position it close to the funnel. This has a direct effect on reducing air bubbles. In addition, compared to manual preparation, during which bubbles and lumps often appear, the machine guarantees a perfectly smooth consistency.

Reduction of air bubbles
