System Smart Pro

1. Select the starting temperature of the feed.

2. Mark the volume.

3. Choose what you heat/defrost food, milk or water in:

- plastic
- silicone
- breast milk bag.

Neno Tocco will select the time for you and remember your last settings.

This multifunctional device is equipped with the Smart Pro system to satisfy even the most demanding users. A special mode allows the steriliser/heater to automatically adjust the fast heating and defrosting times according to the user's individual settings. This feature makes the daily preparation of baby food quicker, easier and less time-consuming. This allows parents to concentrate on other tasks and spend more time with baby.

FAST

Heating milk safely

Breast milk is the most valuable food for a baby. With the Neno Tocco steriliser/warmer, you can heat it to the right temperature (approx. 37°) so that it does not lose its valuable nutritional properties.

Complete sterilisation

Smoczki, gryzaki, butelki oraz niektóre części laktatora wymagają regularnej sterylizacji. Sterylizowanie akcesoriów przy użyciu Neno Tocco pozwala zapobiec rozwojowi drobnoustrojów szkodliwych dla zdrowia dziecka, a przy tym jest wygodniejsze niż popularna metoda „kąpieli wodnej”.

Safe defrosting

The multi-functional Neno is perfect for defrosting breast milk bags and other foods. It saves you time and you can be sure that your baby is getting a healthy meal.

Fast heating

The fast heating function is useful for parents who want to do more in less time. If you need to heat up a jar or water for breastmilk, you can do it in no time at all.

Heating food

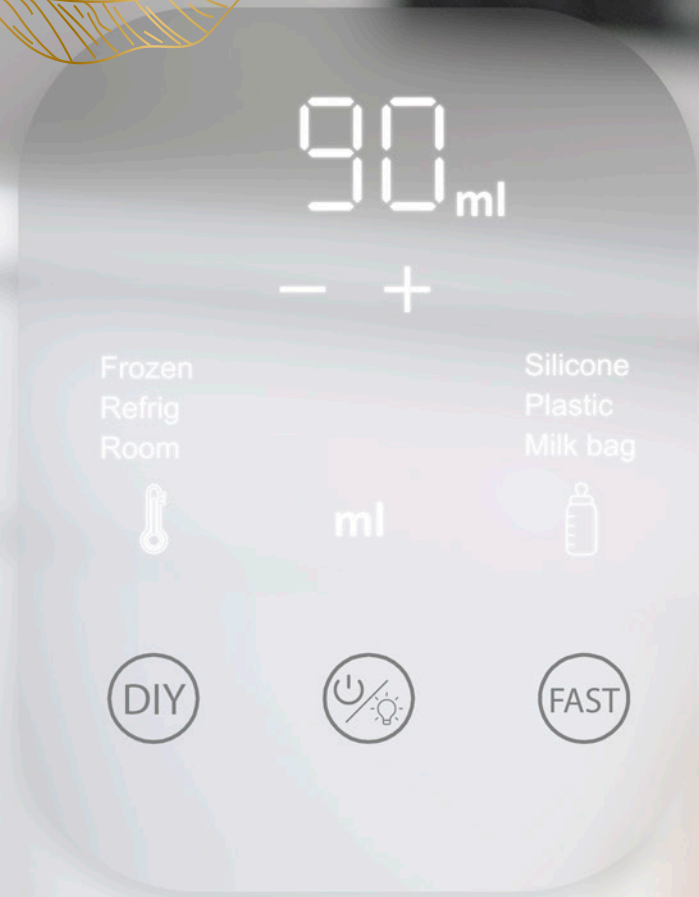

You can heat food without worrying about it burning. The ability to heat food also means you don't have to use extra dishes to prepare dinner for your little one.

Temperature support

Thanks to Neno Tocco, meals are always hot. How is this possible? It's all thanks to the keep-warm function, which ensures that food is always ready to eat.

Touch panel

The clear touch panel has a number of buttons that allow you to customise the operation of the device.

Built-in LED light

The built-in LED light is especially helpful when you want to heat milk in the middle of the night. Its gentle light does not glare and makes it easier to use the warmer when it is dark.

Minimalist design

With its white, minimalist casing, the device will blend in with any kitchen interior. With its original design, it is not only suitable for everyday use, but also as a gift for a baby shower or gender reveal party.

Convenience of use

The Neno Tocco steriliser/warmer has been designed to make everyday life easier for busy parents who appreciate functional yet aesthetically pleasing solutions. You can place it in your kitchen or bedroom to have access to all its functions whenever you need them.

Universal design

The Neno Tocco is more than just a device. With its elegant and aesthetically pleasing design, it matches the décor of any kitchen.

Space-saving

The compact design of the steriliser heater means it takes up very little space. It fits easily on the kitchen counter.

Its main advantage is its multifunctionality, which supports the different needs of babies and parents. The versatility of the Neno Tocco fits in perfectly with the changing pace of family life, offering convenience and flexibility every day.
