Smart Puls Control Technology

The Neno Pulsar dental water flosser is equipped with innovative Smart Pulse Control Technology, offering multiple options for effective teeth and oral cavity cleaning.

The device comes with as many as five interchangeable tips that ensure optimal cleaning results. Thanks to various operating modes and adjustable power levels, the flosser allows you to tailor both the intensity and method of cleaning to your individual needs.

Whether you prefer gentle cleansing or intensive care not only for your teeth, but also for your tongue or orthodontic appliances, Neno Pulsar adapts to your expectations, providing full control over your daily oral hygiene routine.

4 Operating Modes

The Neno Pulsar water flosser offers four operating modes that can be adjusted to individual needs.

The first mode features a continuous stream of water, ideal for removing food debris. The second mode provides a gentler stream, designed for sensitive gums. The third mode massages the gums using three pulses per second, while the fourth mode delivers an adjustable-pressure stream, allowing precise customization of cleaning intensity. Each mode lasts 2 minutes, and on a single charge the device can be used up to 45 times.

Continuous stream with adjustable pressure

5 Interchangeable Tips

The Neno Pulsar dental water flosser includes five interchangeable tips, each designed to deliver a different cleaning effect tailored to individual needs.

The first tip, intended for everyday cleaning, effectively removes food residue and plaque, supporting daily oral hygiene. The second tip generates a rotating stream of water that reaches hard-to-access areas, ensuring even more thorough cleaning. The third tip is specially designed for tongue cleaning, effectively removing buildup and refreshing breath. The fourth tip is ideal for cleaning periodontal pockets and helps prevent gum disease. The final tip is dedicated to users with orthodontic appliances or dentures, effectively removing food debris and plaque from difficult-to-reach areas.

Power clean

The Pulsar dental water flosser is an excellent solution for those who want to maintain oral hygiene at the highest level.

The precise water stream effectively flushes out impurities from interdental spaces and along the gumline—areas where a traditional toothbrush and dental floss often fall short.

Regular use of the flosser helps remove food debris and bacteria, supporting gum health and providing a long-lasting feeling of freshness after every use. It is a simple yet extremely effective addition to daily dental care.

Manual Water Pressure Control

Manual adjustment of the water pressure allows precise customization of cleaning intensity to suit individual needs. A gentler stream is ideal for sensitive areas, while a stronger stream effectively removes food debris and plaque.

In addition, the 360° rotating tip enables precise cleaning from various angles, reaching hard-to-access spaces such as periodontal pockets or areas around orthodontic appliances. This feature ensures comfort and maximum efficiency, adapting irrigation to your expectations

Smart Control – Built-in Timer and Memory Function

Neno Pulsar is equipped with Smart Control technology, featuring intelligent functions such as a built-in timer and a memory function that saves the last used mode.

This allows for quick return to your preferred mode and water pressure every time, eliminating the need to readjust settings. It is an ideal solution that guarantees convenience, time savings, and maximum personalization of every cleaning session.

IPX7 Waterproof Rating

The device has been designed with durability and user comfort in mind, offering an IPX7 waterproof rating. This means it can be safely rinsed under running water without the risk of damage.

Thanks to this feature, using the flosser in the bathroom is safe and convenient, and the device is ready for use in any conditions. The internal water tank only needs to be rinsed with water and left to dry, which helps protect the material and ensures a longer product lifespan.

High Water Pressure (PSI)

The Neno Pulsar dental water flosser stands out with a high pressure output of up to 160 PSI, guaranteeing effective and thorough oral cleaning.

The powerful and highly precise water stream helps remove food debris and bacterial plaque from hard-to-reach areas such as interdental spaces and along the gumline. Thanks to its high pressure, irrigation supports daily oral care prevention and helps maintain a feeling of cleanliness and freshness for longer.

160 PSI

Large Water Tank Capacity

The Neno Pulsar dental water flosser effectively supports daily oral hygiene. The large 350 ml water tank significantly facilitates thorough irrigation without the need for frequent refills.

This capacity ensures uninterrupted operation and enhances overall comfort of use. It is a practical solution for those who value convenience, efficiency, and a smooth daily oral care routine.

350 ML

2 Easy Ways to Fill with Water

The Neno Pulsar water flosser offers two convenient ways to fill the water tank, ensuring hassle-free use.

Water can be added by unscrewing the reservoir or by using the side opening, which allows the tank to be filled without disassembling the device. Both solutions are simple and convenient, enabling quick preparation of the flosser for the next cleaning session.

Complete Set

The complete set includes everything you need for comfortable and hygienic use of the water flosser. In addition to the device itself, the set contains five interchangeable tips that provide various cleaning options tailored to individual needs.

A practical travel pouch is also included, allowing for convenient storage and transport of the device. The pouch not only protects the flosser from damage but also helps maintain high hygiene standards, so you can take it anywhere while ensuring cleanliness and safety. The set is completed with a USB cable for easy charging.
